Product Overview

Introduction

SoundSpot Backstage is an innovative addition to the SoundSpot ecosystem, designed to empower indie musicians and deepen fan-artist connections.

The Problem

In the post-pandemic landscape, SoundSpot faces increasing competition as major streaming platforms replicate social features, threatening our position as a community-first platform. This shift impacts our core users—indie musicians and dedicated fans—who face distinct but interconnected challenges. Indie musicians struggle with inconsistent income, limited visibility, and challenges in building loyal fanbases. At the same time, fans desire more meaningful connections and exclusive access to their favorite artists, which current platforms fail to provide.

The Solution & Its High-Level Goals

SoundSpot Backstage addresses these challenges by:

1. **Empowering indie musicians** by helping them overcome income instability and visibility barriers through the integration of a tiered membership model.
2. **Enhancing fan engagement** by meeting their desire for deeper connections through exclusive content, personalized interactions, and behind-the-scenes access, among other features.
3. **Reinforcing community values** by differentiating SoundSpot as a platform that prioritizes authentic artist-fan relationships.

Scope and Objectives

Scope

SoundSpot Backstage is a tiered membership platform designed to address the unique needs of indie musicians and their fans. By leveraging SoundSpot's existing infrastructure, Backstage offers features that will benefit both artists and fans alike.

In-Scope Features include the following:

1. **Artist-Focused Features:** Enhanced artist profiles, data analytics, and tools to improve income generation and visibility.
2. **Listener-Focused Features:** Access to exclusive content, personalized interactions, and a location-based discovery feed.
3. **Mutual Engagement:** Features that facilitate meaningful artist-fan connections, such as live Q&As, updates, and local events.

Out-of-Scope Features include the following:

1. **Music streaming**, which remains part of SoundSpot's core platform.
2. **Support for mainstream, label-backed artists** outside of the indie ecosystem.
3. **Integration** with external platforms beyond SoundSpot.

Objectives

Primary objectives include the following:

1. **Empower Indie Artists:**
Launch tools like enhanced profiles and analytics to increase artist income by 25% and boost visibility within six months.
2. **Enhance Fan Engagement:**
Provide exclusive content, personalized interactions, and local discovery tools to fulfill fan desires for deeper connections and exclusive experiences.
3. **Integrate Seamlessly:**
Incorporate Backstage into SoundSpot's existing platform, ensuring a smooth onboarding experience for both artists and fans.

Secondary objectives include the following:

1. **Drive Long-Term Retention:**
Retain 75% of Backstage users after the first year through strong artist-fan connections and engaging features.
2. **Differentiate SoundSpot:**
Establish Backstage as a top-three platform for artist monetization and fan engagement within 12 months.

User Personas

Target Users

Our target users are primarily indie musicians in their 20s, navigating the early stages of their careers while balancing part-time or full-time jobs. These artists often operate outside the mainstream music industry, crafting unique, experimental, and genre-defying sounds that reflect their individuality and creativity. They are driven by the desire to share authentic, personal stories through their music, resonating with niche audiences rather than aiming for mass-market appeal.

This group includes solo artists, band members, and producers who value independence and creative freedom but face significant challenges. Many of these musicians face **unreliable income** from streaming, **limited visibility** for their non-mainstream music, and a lack of **industry connections**, making it difficult to grow their careers.

To achieve the goals of our target users, SoundSpot Backstage provides tools to help them overcome these challenges. By offering a sustainable income model, enhanced visibility, and opportunities to build meaningful connections with fans and industry peers, Backstage empowers indie musicians to grow their careers while staying true to their creative vision.

Jake, 30 – The Hustling Guitarist: Jake is a guitarist based in Austin and plays in a local band that performs regularly at small venues. Although they have a great social media presence, expanding to new markets and booking gigs outside Austin has been challenging. Jake believes the band has reached a plateau due to a lack of connections with promoters and venues in other cities. Additionally, converting casual fans into loyal followers and maintaining audience engagement is difficult. Jake's goal is to network with industry professionals, strengthen fan relationships, and stabilize their income through fan memberships and higher-tier interactions.

Maya, 23 – The Aspiring Producer: Maya is an amateur producer living in Brooklyn. While working as a junior software developer, She creates lofi beats and shares them on SoundCloud and TikTok where she has a

decent, but small following. Maya aspires to make music her full-time career but feels isolated without a network of vocalists and instrumentalists to collaborate with. She is also unsure how to effectively market her music. Despite her efforts, Maya struggles to monetize her work and grow her audience. Her goal is to transition to a professional musician by finding collaborators, using data-driven marketing strategies, and generating sustainable income through fan memberships.

User Journey & Jobs To Be Done

When...	I want to...	So that I/we can...
When I want to monetize my music and engage my most dedicated fans,	I want to create multiple membership tiers with exclusive content,	So that I can increase my income and deepen my connection with supporters.
When I want to showcase my work and engage fans more effectively,	I want to create comprehensive and dynamic profiles,	So that I can present my latest music, videos, and events while offering varying access levels based on membership tiers.
When I join Backstage and want to set up my profile quickly,	I want to have my past performances automatically integrated into my profile,	So that I can efficiently create a professional portfolio and start engaging with fans without manual setup.
When I want to understand my audience and optimize my engagement strategies	I want to access detailed analytics on my profile's performance,	So that I can make informed decisions to grow my fanbase and enhance my monetization efforts.
When I want to discover and connect with local artists,	I want to browse a dynamic, location-specific feed,	So that I can find nearby musicians, attend local events, and build a community presence.

Jack plays his guitar, and his friend becomes amazed, "Jack, you play amazing, you should have been famous."

Jack always wanted to be a musician, but fearing about his financial security, he ended up becoming a barista.

"I don't have connections." OK, so what? There is SoundSpot!

Jack signs up for Soundspot and records a few videos of him playing guitar and uploads it to Soundspot

Using Soundspot's actionable insights and connections, Jack moves with confidence while monetizing his music through memberships

Using his momentum on SoundSpot, Jack transitions into a professional music career, making his lifelong dream come true.

Functional Requirements

Features

The following features will support Backstage in achieving the set objectives in our scope:

Exclusive Backstage Content

- Our central feature, artists gain the flexibility to create multiple membership tiers at varying price points, ranging from free to \$100 or more per month. Each tier offers varying levels of access, such as exclusive content, early access to new releases, behind-the-scenes updates, or personalized fan interactions.
- This feature allows artists to monetize their personal brands effectively, while fans are incentivized to choose higher tiers for more personalized and engaging experiences.
- This feature is priority tier 1 and must be functional prior to launch.

Enhanced Artist Profiles

- Additional profile options will empower musicians to present comprehensive public portfolios, featuring their latest music, videos, behind-the-scenes content, and upcoming events.
- These profiles will serve as a showcase of the artist's work and offer a gateway for deeper fan engagement.
- Fans will have differing levels of access to profile features depending on the artist's membership set up.
- This feature is priority tier 1 and must be functional prior to launch.

Onboarding for Existing Musicians

- A smart algorithm selects key video clips from saved performances from our existing musicians to populate their page, streamlining profile creation by automatically generating artist portfolios from past live-streams.
- The onboarding process also highlights the benefits of the new profile page and membership options, encouraging active participation and long-term engagement.
- This feature is priority tier 1 and must be functional prior to launch.

Profile Analytics

- Backstage equips artists with powerful data analytics tools to gain actionable insights about their audience and optimize engagement.
- This data-driven approach enables musicians to make informed decisions to grow their fanbase, discover creative partnerships, and foster meaningful connections within the music community.
- This feature is priority tier 2 and can be implemented post launch.

Location-Based Exploration

- Fans can explore a dynamic feed showcasing nearby artists, blending music clips from artist portfolios with engaging backstage content like updates, events, and exclusive posts.
- This location-based feature promotes local discovery, enabling fans to connect with musicians in their area and fostering opportunities for in-person engagement and community building.
- This feature is priority tier 2 and can be implemented post launch.

Non-Functional Requirements

Requirements

The following requirements are necessary to ensure the quality of experience in BackStage

Performance and Scalability

- The platform must be able to handle the activity of our current user base (1.5M users), particularly during high-traffic events such as releases or posts from popular users.
- The system must also be able to support up to 5 million concurrent users without noticeable degradation in response time to account for growth.

Artist Verification System

- A robust artist verification process to ensure musicians are legitimate and not profiting off another artist's work. This includes ID verification, social media account linkage, and a manual review option for flagged profiles.

Data Security and Privacy Compliance

- Ensure the platform adheres to data protection laws. Encrypt all sensitive user data, and implement secure authentication protocols, such as two-factor authentication for artist accounts.

Payment Processing and Fraud Prevention

- Secure payment systems with multi-currency support, integration with major payment providers, and fraud detection mechanisms to prevent unauthorized transactions.

Mockups & Feature Flow

Resource Requirements

Human Resources

The project requires a cross-functional team to deliver the SoundSpot Backstage feature. Below is a breakdown of the team roles.

Team	Members
Development Team	2 Frontend Developers: To create the user interface for the backstage feature, focusing on responsive design and smooth user experience. 2 Backend Developers: To build and maintain the APIs, database integrations, and business logic for backstage functionalities. - DevOps Engineer: To ensure smooth deployment, manage CI/CD pipelines, and maintain system reliability and scalability.
Design Team	- Product Designer: To lead user interface (UI) and user experience (UX) design, ensuring an intuitive and visually appealing backstage feature. - UX Researcher: To conduct user interviews and usability testing for validating the backstage concept and iterating designs.
Product Management	Product Manager: To oversee the project, define priorities, manage stakeholders, and ensure alignment between teams.

Marketing & Sales Team	- Marketing Specialist: To create launch campaigns, user onboarding materials, and promotional content. - Sales Manager: To handle software sales and financing. Handle interactions with partnered artists.
QA Team	QA Engineer: To test the backstage feature for functionality, performance, and security issues across different devices and user scenarios.

Technical Resources

Category	Tools
Development Tools	- Frontend Framework: Flutter (for compatibility across mobile and web platforms). - Backend Framework: Go (for high-performance server-side logic). - Database: PostgreSQL (for relational data storage). - API Management: GraphQL (for efficient data fetching and flexibility). - Version Control: GitHub (for source code collaboration and repository management).
Design Tools	- Prototyping and Design: Figma (for wireframing and high-fidelity prototypes). - User Testing: Maze (for usability testing).
Collaboration and Project Management	- Communication: Slack (for real-time team communication). - Project Management: Jira (for tracking tasks, sprints, and milestones).
Infrastructure	- Hosting: AWS (for scalability and reliability). - CI/CD Pipeline: GitHub Actions (for automated builds and deployments). - Monitoring: Datadog (for performance monitoring).

Estimated Budget Allocation

- Personnel Costs: ~\$1.5M (annual salaries for a 10-member team).
- Tools and Technologies: ~\$200K (licenses, cloud infrastructure, and testing tools).
- Miscellaneous: ~\$300K (marketing campaigns, user research incentives, and unexpected expenses).

Testing and Quality Assurance

To ensure the SoundSpot Backstage feature meets its requirements and delivers a high-quality experience, the following testing strategy and quality assurance procedures will be employed:

Testing Strategy

1. Unit Testing
 - Each module or component will be tested in isolation to verify its functionality.
 - Automated unit tests will be written for both backend and frontend code, covering at least 80% of the codebase.
2. Usability Testing
 - Conduct usability tests with a small group of target users (musicians and listeners) to identify pain points and areas for improvement.
 - Iterative testing during the development cycle will ensure the interface remains intuitive and user-friendly.
3. Performance Testing
 - Measure system performance under normal and peak load conditions.
 - Tools like Apache JMeter or Gatling will be used to identify potential bottlenecks and optimize response times.
4. Beta Testing
 - A beta release will be deployed to a select group of users to gather feedback on functionality and usability.
 - Feedback from beta testing will be analyzed to make final improvements before the full launch.

Quality Assurance Procedures

1. QA Standards and Checkpoints
 - QA engineers will define testing standards and conduct regular reviews of test cases.
 - QA checkpoints will be built into the development lifecycle to ensure adherence to quality requirements.
2. Continuous Integration/Continuous Deployment (CI/CD)
 - Automated test suites will run as part of the CI/CD pipeline to detect issues early.
 - Any code failing tests will be flagged and rolled back for developer review.
3. Bug Tracking and Resolution
 - Bugs will be tracked using Jira, categorized by severity, and prioritized for resolution.
 - Regular bug triage meetings will ensure alignment between QA and development teams.
4. Documentation
 - Comprehensive test case documentation and issue logs will be maintained to facilitate knowledge transfer and transparency.

Success Metrics

- Bug Density: Aiming for fewer than 1 critical bug per 1,000 lines of code.

- User Satisfaction Score: Target a satisfaction score of 90% or higher from beta testers.
- Performance Metrics: Page load times under 2 seconds and uptime of 99.9% or higher.
- Usability Issues: Resolve at least 95% of usability issues identified in testing.

Metrics and Success Criteria

To evaluate the success of the SoundSpot Backstage feature, we will track key performance indicators (KPIs) and establish clear success criteria aligned with the product's objectives. These metrics will help us measure the impact on users and assess overall adoption, engagement, and satisfaction.

Key Performance Indicators (KPIs)

1. Adoption Metrics
 - ☐ Artist Onboarding Rate: Percentage of existing artists on the platform who activate and use the backstage feature within the first 3 months of launch.
 - ☐ Listener Engagement Rate: Number of listeners accessing backstage content relative to the total active listener base.
2. Engagement Metrics
 - ☐ Content Upload Frequency: Average number of backstage posts (e.g., videos, updates) per artist per month.
 - ☐ Interaction Rate: Average number of comments, likes, or other interactions on backstage posts.
 - ☐ Session Duration: Time spent by listeners engaging with backstage content during each session.
3. Revenue Metrics
 - ☐ Premium Subscriptions Growth: Increase in premium memberships tied to access to exclusive backstage content.
 - ☐ Tier Upgrades: Percentage of fans upgrading to higher-tier memberships after the feature launch.
4. Retention Metrics
 - ☐ Churn Rate: Percentage of artists and listeners who discontinue using the backstage feature within the first 6 months.
 - ☐ Returning User Rate: Percentage of users (both artists and listeners) revisiting the backstage feature at least once a week.
5. Feedback Metrics
 - ☐ Net Promoter Score (NPS): User-reported likelihood to recommend the backstage feature to others.
 - ☐ User Satisfaction Score (USS): Average rating from artists and listeners collected via surveys.
6. Operational Metrics
 - ☐ System Uptime: Percentage of time the backstage feature remains operational (target: 99.9% or higher).
 - ☐ Load Time: Average time taken to load backstage pages or content (target: under 2 seconds).

Success Criteria

The following are goals for SoundSpot Backstage in the first 6 months of launch.

- **Adoption**
At least 50% of active artists adopt the backstage feature within the first 3 months of launch.

- **Engagement**
An average of 3 backstage posts per artist per month, with at least 60% of premium listeners engaging with the content.
- **Revenue Growth**
A 10% increase in premium subscriptions within 6 months, driven by backstage-exclusive content.
- **Retention**
A returning user rate of 75% for both artists and listeners after 6 months.
- **User Satisfaction**
Achieve a Net Promoter Score (NPS) of 8 or higher and an average User Satisfaction Score (USS) of 4.5 out of 5.

Constraints and Assumptions

Constraints

We have identified the following limitations that may pose constraints on SoundSpot's development and production.

1. **Scalability:** The platform must handle simultaneous real-time interactions (e.g., live chats, comments) while serving as a portfolio for audio and visual media uploads.
2. **Copyright and Licensing:** Protection mechanisms for uploaded works to prevent piracy or unauthorized use.
3. **Engagement Balance:** Ensure fan interaction doesn't overwhelm artists, keeping engagement manageable and rewarding for artists while still meaningful for fans.
4. **Moderation:** The platform needs scalable systems for moderating user comments and interactions in Backstage to ensure a positive experience.
5. **Unique Value:** Balance social interaction and portfolio showcasing while avoiding redundancy with existing platforms.
6. **Storage and Bandwidth:** Hosting artist portfolios requires robust cloud storage and streaming capabilities, especially for high-quality audio files.
7. **Fraud Prevention:** Monitor unusual transaction patterns to protect artists from chargeback fraud or financial scams.
8. **Global Safety Standards:** Comply with safety laws and regulations in all countries where the platform operates.

Research-Informed Assumptions

Our research showed that independent musicians face major hurdles, with most struggling financially (76%), lacking exposure (41%), and finding it hard to grow a fanbase (36%)¹. At the same time, fans want more meaningful connections with artists—92% crave authenticity, 78% enjoy exclusive content, and 85% value direct interactions like Q&As². These insights show a clear need for a platform like Backstage that helps artists showcase their work, connect with fans, and grow their careers, all in one place. By focusing on authentic interactions, offering tools to track growth, and creating opportunities for exclusive fan experiences, Backstage can bridge the gap between musicians and fans while tapping into the growing demand for music discovery and engagement.

¹ "Music Industry Report 2023." Xposure Music, 2023, <https://info.xposuremusic.com/article/music-industry-report-2023>.

² Superfans Want to Feel Closer to Their Favorite Artists." FanCircles, 2023, <https://www.fancircles.com/music-industry-report-2023/>

Core Assumptions

- Creators benefit from close fan interactions, which enhance loyalty and revenue opportunities.
- The platform supports growth and enhances user experience through collaborative features without introducing undue complexity or compromising stability.
- Artists will continue seeking platforms that help them expand their fan base and increase their income.

Milestones and Timelines

Phase 1: Pre-Launch (0-3 Months)

1. Wireframes & Prototype
 - Develop wireframes and an interactive prototype featuring key functionalities:
 - Exclusive content feeds
 - Subscription tiers
 - Artist profiles
2. Initial Artist Partnerships
 - Secure 10-15 independent artists as early adopters to populate the platform with initial content and generate buzz.
3. Beta Testing & Feedback
 - Conduct a closed beta test with select artists and fans.
 - Collect feedback on user experience, identify bugs, and uncover desired features.

Phase 2: Soft Launch (4-7 Months)

1. MVP Development Completion
 - Finalize MVP with these core features:
 - **Feature 1:** Artist profiles for showcasing public portfolios.
 - **Feature 2:** Exclusive backstage content with direct chat and comment capabilities.
2. Soft Launch with Limited Users
 - Launch the platform to 1,000 early adopters to test scalability and gather user feedback.
3. Incorporate Feedback & Refine Features
 - Iterate based on user insights:
 - Improve app design and performance.
 - Address commonly requested features and pain points.

Phase 3: Full Launch (7-8 Months)

1. Launch Marketing Campaign
 - Build platform awareness through:
 - Social media campaigns
 - Influencer partnerships
 - Targeted ads
2. Public Launch
 - Officially release SoundSpot Backstage to the public with:
 - A larger content library
 - A polished user experience
3. Expand Artist Onboarding

- Launch outreach campaigns to onboard 100+ additional artists, expanding content diversity and subscription tiers.

Phase 4: Growth & Feature Expansion (9-12 Months)

1. Finalize All Features
 - Add advanced features:
 - **Feature 3:** Data analytics for artists.
 - **Feature 4:** Location-based exploration to connect fans with local artists.
2. Expand Membership Options
 - Introduce higher-tier subscriptions and customizable tiers for artists to maximize monetization.
3. International Expansion
 - Launch localized marketing campaigns and app translations targeting music-rich global markets.
4. Community Features
 - Introduce interactive community functionalities:
 - Fan forums
 - Artist Q&A boards
 - Group listening sessions
5. Monetization Refinement
 - Introduce new revenue-sharing models for artists.
 - Offer premium app features, such as:
 - Priority search results
 - Ad-free browsing

Go-To-Market Strategy

Pre-Launch Phase

In the pre-launch phase, SoundSpot Backstage will focus on the existing user base, building excitement and educating users about the upcoming product. Existing users will be notified of the launch through in-app notifications, teaser email campaigns, and personalized banners emphasizing Backstage's unique features such as exclusive content, grassroots music discovery, and enhanced artist profiles.

This approach is ideal because Backstage is a purely digital service targeting independent musicians and their fans, both accustomed to online platforms for streaming, engaging with content, and subscribing to services. Retail distribution is unnecessary, and a B2B approach would conflict with the platform's mission to empower grassroots and independent artists.

The sales strategy during this phase is to identify high-engagement artists to act as ambassadors, offering them early access to Backstage with perks like discounted subscriptions and premium features. A small sales team will reach out to these artists directly, pitching Backstage's potential to enhance fan engagement and revenue. Additionally, a beta program will launch with 10-15 musicians and their fans, allowing the team to refine the platform based on feedback while generating early success stories for future marketing efforts.

A dedicated marketing team will include teaser campaigns on social media platforms and SoundSpot's app, featuring countdown timers, promotional videos, and "coming soon" banners. Influencer partnerships with indie artists will build credibility and excitement, showcasing how Backstage empowers artists to connect with

their fans. Meanwhile, the customer service team will prepare for launch by developing a comprehensive knowledge base, FAQs, and chatbot functionality while training for personalized onboarding support.

Launch Phase

The launch phase will center on introducing Backstage to SoundSpot's 1.5 million active users through the existing platform. In-app banners and app-store feature placements will ensure visibility and awareness. During this time, Backstage will create momentum through direct engagement with indie musicians and fans.

In a focus towards new users, a trained sales team will actively attend music festivals, industry showcases, and local events to promote Backstage and connect with indie artist management teams. By presenting data-driven proposals, the team will demonstrate Backstage's potential to enhance revenue and fan engagement. Meanwhile, early testimonials from beta users will be featured in blogs and social media posts to paint the picture of real-world success stories to build credibility.

In this phase, the marketing team will be focused on social media to attract new users. This will be accomplished by combining targeted ads on Instagram, TikTok, and YouTube with personalized campaigns within the SoundSpot ecosystem. Success stories will play a critical role in attracting new musicians and converting existing fans into premium subscribers. On top of social media campaigns, the team will push a referral program that will incentivize both fans and artists to invite others to join, offering rewards such as free premium months or merchandise.

To ensure a seamless user experience, customer support will be supported by the proactive onboarding process with features like personalized welcome emails and in-app tooltips to guide users.

Post-Launch Phase

In the post-launch phase, Backstage will scale its reach and deepen its presence within the indie music community. The platform will remain exclusively online, with fully rolled out features like location-based artist discovery to boost fan engagement and promote local connections. These features will drive organic growth while keeping the platform aligned with its grassroots mission.

Sales efforts will expand to include an ambassador program, recruiting influential artists with loyal fanbases. These ambassadors will receive premium benefits in exchange for promoting Backstage to their followers across social platforms and, by way of network, more artists. Self-service tools will also become a primary focus, enabling artists to onboard and optimize their profiles independently through intuitive in-app prompts and guidance.

Marketing will shift towards a long-term content strategy, including the launch of a "SoundSpot Stories" blog and YouTube series. These platforms will showcase artist journeys and highlight Backstage's impact on their careers. Digital advertising campaigns will scale up, featuring real users in video ads across Instagram, TikTok, and YouTube. Community-building initiatives such as virtual concerts and networking events will strengthen connections among artists and fans.

Customer service will continue to evolve post-launch, with regular updates to FAQs and tutorials based on user feedback. AI-driven insights will be used to preemptively address common challenges. Premium users will receive loyalty rewards and exclusive support channels, further encouraging engagement and retention. This phased approach ensures Backstage remains scalable, user-focused, and aligned with its mission to empower independent musicians.
